

## Spot the five errors

### Task

There are **five** errors in the program below. Place a circle around each of them, and draw an arrow and explain the error.

```
1 colour == input()
2 suit = input()
3 if colour != "red" AND
4   suit = "hearts":
5     print("My card is a
6       match")
   Else:
       print("My card is not
         a match")
```
