Make a prediction

```
1  print("Username: ")

2  username = input()

3  if username == "Eirini":

4      print("Password: ")

5      password = input()

6      if password == "Fish4321":

7      print("Access granted")
```

Question

Explain exactly what you think will happen when this code is executed.

Think about...

- What would happen if Ben was entered for the username?

- What would happen if Eirini was entered for the username?

- What exactly needs to be inputted to gain access to the system?

Write your prediction below:
