Make a prediction

```
1  print("Username: ")
2  username = input()
3  if username == "Eirini":
4      print("Password: ")
5      password = input()
6      if password == "Fish4321":
7          print("Access granted")
```

Question

Explain exactly what you think will happen when this code is executed.

Think about...

- What would happen if Ben was entered for the username?
- What would happen if Eirini was entered for the username?
- What exactly needs to be inputted to gain access to the system?

Write your prediction below:
